- Erosion control plans

## Our Partial Client List Includes:

- Counties
- Municipalities
- Transportation agencies and companies
- Mining and aggregate companies
- Contractors
- Developers
- Property/facility management companies
- Solid waste clients
- Automotive facilities

## PROVIDING THE RIGHT SOLUTIONS

Growing public concern and awareness about controlling water pollution led to the enactment of the Federal Water Pollution Control Act, commonly known as the Clean Water Act. Recent changes in stormwater regulations resulted in more site regulations and responsibilities for site operators. State and local governments also more frequently are augmenting federal regulations with their own sets of policies and regulations to address during planning and permitting efforts.

We understand those regulations and can implement conscientious project-specific stormwater programs designed to help comply with them. We have qualified people and systems in place to perform services from beginning to end. Kleinfelder provides design-build and construction management services, which manage both the quality and quantity of stormwater runoff. Our design-build service uses a multi-disciplinary approach to design appropriately-sized systems that reduce stormwater pollutants to the maximum extent practicable. We can develop stormwater compliance programs that meet the appropriate construction, general industry, local, state, and federal stormwater regulatory requirements. Our stormwater professionals have the training, knowledge, project experience, and resources to perform a wide array of stormwater services.
